

Marine and Deep Cycle Batteries

GOLD

ACDelco offers a full line of the most popular sizes of Marine and RV batteries including Groups 24, 27, and 31 in both Maintenance-Free Flooded and Absorbent Glass Mat (AGM) technologies. Designed with features customers expect like handles, charge eyes, and terminal hardware included on the terminal covers. These batteries have been engineered to meet most of the popular OE requirements and come with a strong replacement limited warranty*.

Engineering, Reliability, Confidence

ACDelco batteries have a long history of excellent quality and professional engineering, helping to build confidence in their reliability. Construction elements have been carefully selected and tuned specifically for Marine and RV-style applications.

- Lead calcium alloy negative grids help resist gassing and water usage for long service life as well as low self-discharge for long off-use life
- Full-framed, stamped, positive grids help ensure durability and minimize premature battery failure
- High-density tetrabasic paste in Marine AGM helps improve performance as well as life
- Terminals are constructed to resist acid leaks and seepage corrosion
- Cases are 100% leak tested to help ensure leak-free performance
- Every battery is electrical short tested to help minimize early failures

*Replacement limited warranty to the original retail purchaser. See acdelcocanada.com for details.

Marine and Deep Cycle Batteries

GOLD

Selecting the right battery for the job

ACDelco Marine and RV batteries come in Starting, Deep Cycle, and Dual-Purpose varieties to help meet the unique power usage pattern of each application. While each battery type can provide performance in other roles, they tend not to last as long or give the best run-times when used outside of their intended application type. Most modern Boat and RV setups have multiple batteries using the best type for each role.

A small boat with a gas motor and an electric trolling motor may be well served with a single dual-purpose battery if the battery is not drained too deeply too often. However, modern boating has come a long way in terms of the technology and devices available. Energy-hungry systems like GPS anchoring via trolling motors, sound systems, sonar, lights, etc. can require serious electrical draw that is best served by a deep-cycle battery purpose-built to provide energy over long periods. Large motors can take serious cranking power to start reliably and are best served by starting batteries built specifically to provide that quick, strong jolt of power. Recreational Vehicles, Campers, and camping setups typically use Deep Cycle batteries, as no starting is required. Consult the owner's manual for suggested battery sizes and power levels for the best results.

Battery Type \ Example Application			
	Engine Starting	Engine Starting plus Trolling	Trolling and other Electronics / RV
Flooded Starting	Better	Good	NOT suggested
Flooded Dual Purpose	Good	Better	Good
Flooded Deep Cycle	NOT suggested	Good	Better
AGM Starting	Best	Best	Better
AGM Deep Cycle	NOT suggested	Good	Best

Marine and Deep Cycle Batteries

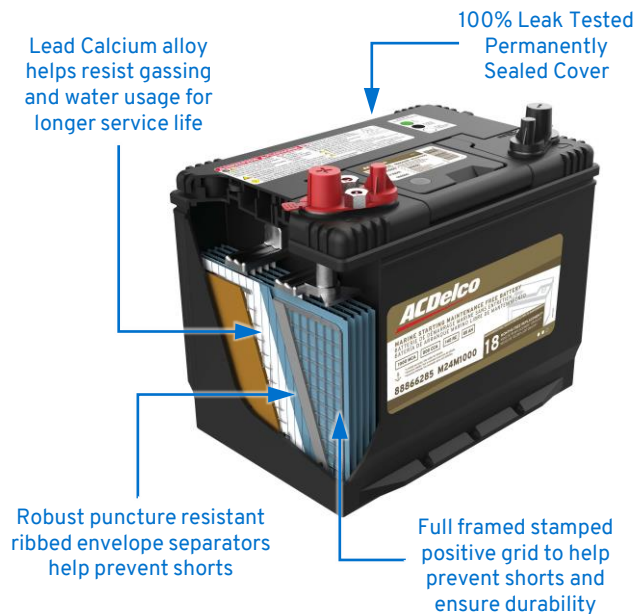

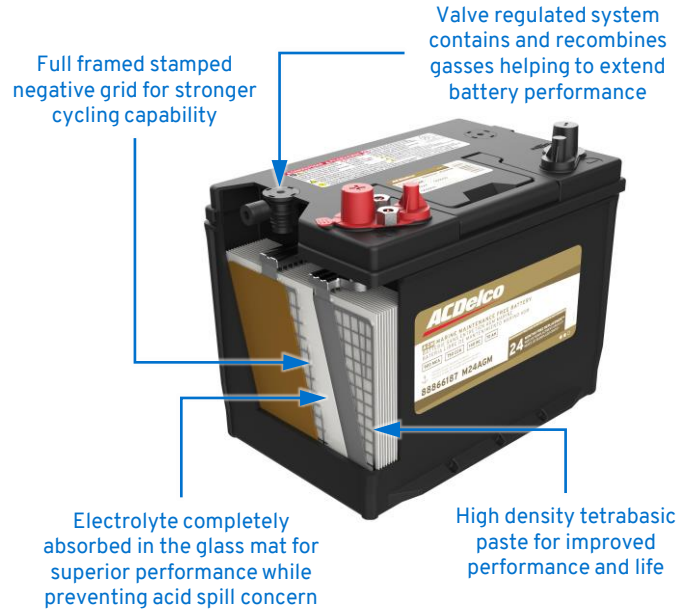

GOLD

AGM

Absorbent Glass Mat battery technology was developed specifically for superior cycling and charging capabilities over flooded batteries, that's why they are used in high-strain applications like start-stop automobiles. They are the ultimate dual-purpose Marine battery, providing excellent starting capability, but also able to cycle deeper and more often, and still provide reliable, long-life service

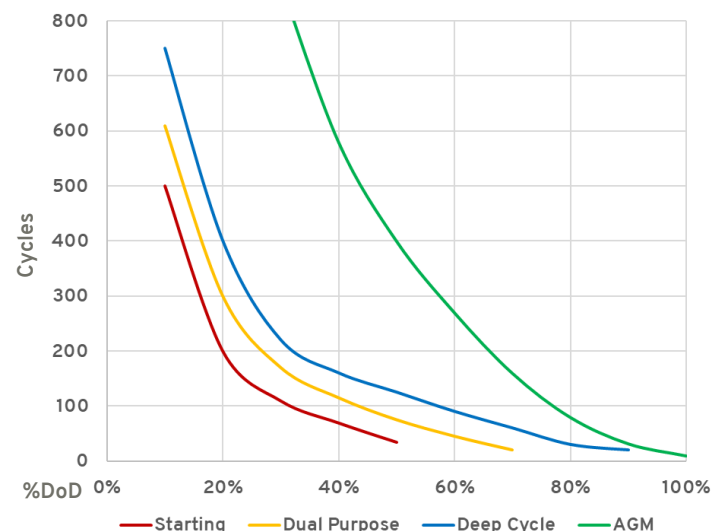

Flooded

Just like Automotive batteries, Marine batteries have seen development in construction and technology. Gone are the days of having to check the water level and add distilled water due to the calcium alloy maintenance-free construction. Refinements in chemistry and construction over the last few decades have increased life expectancy and durability as well.

Depth of Draw Cycle Comparison

DoD or Depth of Draw is the measure of how deeply the battery is drained before charging. The deeper the draw the shorter the overall life of the battery. Deep Cycle batteries are built to enable deeper draw and still last, but AGM provide the best cycling capabilities overall.

*Replacement limited warranty to the original retail purchaser. See acdelcocanada.com for details.
